Notes:

5. Cadence application binaries for Sun will also execute on the Fujitsu PrimePower platform on . Please see the matrix above for specific product/OS version combinations.

6. For all Cadence products that can link to user-created code (for example, PLI on Verilog-XL), the user-created code must be compiled and linked on the lowest level OS supported for that release.

7. All releases in this matrix contain a 32-bit executable. Additionally, several releases also contain a separate 64 Bit executable on the Solaris, HP_UX, AIX and Linux Platforms. No 64 Bit capability is provided on Windows platforms. The Customer will be prompted to choose between 32 and 64 bit executables during the installation process.

8. X86_64 denotes 64 bit processors whose instruction sets are compatible with the X86 standard such as Intel Xeon-EM64T, AMD Opteron, etc.

9. Please check the specific product's install "readme"; there may be product-specific platform support exceptions to this matrix.
