

EDK for Palladium Series

Full system-verification solution

The Cadence® Emulation Development Kit (EDK) is a pre-configured off-the-shelf solution that allows users to validate their systems and co-verify hardware and software in a pre-silicon environment. This solution provides modeling accuracy, high performance, remote access, and emulation-speed tolerance from very low speeds in USB to fully static operation in PCI Express® (PCIe®), simplifying the engineering task and dramatically improving verification productivity.

Overview

The EDK for Palladium Series is a pre-configured off-the-shelf, rack-mountable solution for system-level validation that provides modeling accuracy, high performance, and remote access using the Cadence Palladium® series of verification platforms. It enables rapid deployment of a high-performance system-level validation platform and makes it possible to co-verify hardware and software with applications running on an industry-standard operating system (OS) using the standard software stack, dramatically improving verification productivity.

The Cadence EDK is pre-configured for protocol-specific interfaces so that device software engineers can easily develop and validate application software and device drivers for standard OSs over device hardware interfaces such as PCIe and USB.

Pre-Configured Solution for Full-System Validation

The rise in hardware and software complexity is making system validation increasingly difficult. To ensure completeness of verification, it is essential to run production-level system software in a pre-silicon environment to account for all corner cases, which are very difficult to model in a testbench-driven environment.

The EDK is a pre-configured solution, enabling users to quickly bring up a real-time system environment that can aid in developing and testing drivers, operating systems, test suites, etc. on a pre-silicon design under test (DUT). It facilitates a flexible but high-fidelity pre-silicon verification platform, allowing for easier integration of system hardware and software.

Unlike virtual channels that must share a single connection channel for each additional port, the Cadence EDK offers full-speed performance for any number of ports in the DUT. This ensures full scalability and bandwidth for fast system verification.

For PCIe interface designs, the EDK provides fully static, clock-stopping-tolerant operation, enabling users to pause systems indefinitely for debug tasks and then continue operation seamlessly. This capability, combined with the Palladium platform's advance debug tools and features, provides a robust and highly flexible debug platform both for hardware and software debug.

Remote Accessibility

The Cadence EDK offers a fully secure, cloud-computing setup with remote accessibility, ensuring that teams distributed across different geographical locations can easily access and complete their system verification tasks through a Palladium series verification platform that is hosted at a data center location. This can be achieved without compromising the accuracy of traffic through the DUT or the runtime performance.

Benefits

Highest productivity with high fidelity

- ▶ Offers higher verification performance than other verification methods without abstracting out critical portions of the design, while running in a real system environment that will be used in post-silicon validation
- ▶ Provides full-speed performance and scalability with multi-interface designs or multiple interconnect technologies

Offers rapid verification deployment

- ▶ Provides a pre-validated emulation interface fully compatible with the Palladium series
- ▶ Enables rapid creation of system-level environments using the same hardware and software that the real silicon will use

Enables reuse

- ▶ Built around standards-compliant interfaces such as PCIe and USB, and can be reused for other projects
- ▶ Improves productivity by getting the design running quickly without weeks or months of specialized test environment creation
- ▶ Allows use of standard third-party protocol analysis tools, driver development suites, and traffic-generation utilities

Ensures quality

- ▶ Tested and verified by Cadence against independent verification IP (VIP) and other user designs
- ▶ Cadence-provided solution lets you verify your design quickly and efficiently to ensure high product quality

Reduces system emulation bring-up risk

- ▶ Performs interface testing at the physical level
- ▶ Runs full-system enumeration connected to a real server chipset running a real OS with a full software stack
 - Does not abstract away low system-level connection issues that arise with real chipsets
 - Does not abstract away the real enumeration sequence of different OSs
- ▶ Runs entire system-level real tests, just as the design silicon will have to do when it is deployed
- ▶ Allows interaction with multiple system-level interconnects such as PCIe and USB, all in the same verification environment and without impacting performance

- ▶ Allows emulation to work in a fully static, clock-stop-ping-tolerant mode for PCIe interface designs:
 - Enables use of Sim-Accel and in-circuit emulation and mixed-use modes
 - Allows users to pause their design and later continue without hardware or software impact or modification to their design or environment
 - Enables ability to use all Palladium Full Vision modes and InfiniTrace debug tools for efficient hardware debug

Features

- ▶ Remotely configure, use, and monitor using IP network
- ▶ Supports remote protocol and traffic monitors
- ▶ Supports Windows 10 and Linux OSs
- ▶ Supports latest PCIe 4.0 and SpeedBridge Adapter for HD PCIe 5.0
- ▶ Supports latest USB 3.0 Device and SpeedBridge Adapters for USB 3.2 Gen 2 Host and USB 3.2 Gen 2 Device

Cadence Services and Support

- ▶ Cadence application engineers can answer your technical questions by telephone, email, or Internet—they can also provide technical assistance and custom training.
- ▶ Cadence-certified instructors teach more than 70 courses and bring their real-world experience into the classroom.
- ▶ More than 25 Internet Learning Series (iLS) online courses allow you the flexibility of training at your own computer via the internet.
- ▶ Cadence Online Support gives you 24x7 online access to a knowledgebase of the latest solutions, technical documentation, software downloads, and more.
- ▶ For more information, please visit www.cadence.com/support for support and www.cadence.com/training for training.
